

MICHAL WOLLNER

ECO.URBANISM

Nature-based planning for cities, landscapes and bluescapes – and the living edges where they meet.

PROFILE

Landscape architect with ten years of planning across scales, from regional corridors and city-wide strategies to the street, the park and the single plant. My practice follows an eco-urbanist approach: ecology, water, public space, mobility and community are read as layers of one urban and landscape system, and each project is shaped by how those layers connect. For municipalities and regional authorities in Israel, I have carried this reading from strategic frameworks and master plans through design to execution plans and supervision on site. My MSc at the University of Copenhagen grounded the approach in research, and today it shapes a GIS-based quality index for Tel Aviv-Jaffa's public realm.

PROFESSIONAL EXPERIENCE

2021 – now

Michal Wollner – Eco.Urbanism

Founder · Israel / Denmark · Public authorities, regional councils and planning offices

- An eco-urbanism practice working across scales, from strategy to construction, and coordinating multidisciplinary teams, municipalities and stakeholders around one holistic, nature-based reading of each place.
- “Public Infrastructure”, Tel Aviv-Jaffa Municipality – a city-wide strategic framework building on my MSc thesis: a holistic planning methodology, a purpose-built QGIS analysis tool and a quality index for the public realm.
- Sea-to-Jordan corridor – a strategic, basin-wide master plan (≈630 km²) for the Kishon and Harod rivers, an ecological corridor from the Mediterranean coast to the Jordan Valley, with LYGM.
- Native planting design for a restored stream corridor in an urban park (75,000 m²), Lod Municipality – habitat-led riparian design with 157 native and endemic species, with MKR Architects. Under construction.
- “Mediterranean Forest-Neighbourhood” – an urban planting-systems master plan (236,000 m²) for Lod Municipality, with Zura Studio.
- Regional master plan for overnight-camping sites across the Upper Galilee, balancing tourism growth with ecological conservation.
- Shafdan visitor and education centre for circular water use (client: Igudan) – a landscape that teaches the water cycle. Under construction.
- Execution plan for an educational agricultural farm in the Upper Galilee. Under construction.
- Timna reservoir – design language for turning an operational reservoir into a nature and birdwatching park.
- Water-body and stream restoration projects across Israel, from strategic planning to construction.
- “Quarrying Promises” – a conceptual regenerative-tourism master plan for a former quarry site.

2019 – 2022

MKR Architects ↗

Team Leader & Landscape Architect · Israel

- Led projects from strategic master plans to built work, integrating public space, infrastructure and ecology and coordinating architecture, engineering and planning teams.
- Planting design for a coastal desert promenade, Eilat – drought- and salt-tolerant species as the primary shading tool, with detailing and after-planting supervision on site.
- Arava Delta – wetland habitat and planting design for a canal-to-delta transformation.
- Eilat Coastal Strip Master Plan – a landscape-led strategy balancing tourism growth with a thriving coastal “bluescape”.

2016 – 2018

LYGM | Environmental Projects ↗ · Zura Studio ↗

Team Leader & Landscape Architect at LYGM · Landscape Architect at Zura, an Israeli-Spanish studio

- Regional landscape planning and ecological restoration with planners, ecologists and engineers; urban tree planting systems and nature-based solutions for renewal areas.

EDUCATION

2021 – 2023

MSc Landscape Architecture (Cand.hort.arch.)

University of Copenhagen · Dept. of Geosciences and Natural Resource Management

- Thesis “Urban Synergy: Towards Mediterranean Eco-Urbanism” – a holistic framework of nature-based solutions and rewilding for climate resilience in Tel Aviv-Jaffa, built on interviews with municipal planners in Copenhagen and Tel Aviv-Jaffa, GIS analysis and site observation. Co-supervised by Assoc. Prof. Ole Fryd and Prof. Anne Tietjen. Grade 12/12.
- Research project “Enhancing Social Resilience using Mediterranean Urban Green Infrastructure: Barcelona and Tel-Aviv-Yaffo” (2022), under Assoc. Prof. Natalie Gulsrud.
- Coursework: “Urban Nature – Naturpark Nordhavn” (2022); “Low-Impact Recreation and Forest Biodiversity – Vestsboen” (2022).

2012 – 2016

BLA Landscape Architecture

Technion – Israel Institute of Technology

- Magna Cum Laude. Exchange at UNSW Sydney, 2015.

SKILLS

Eco-urbanism	Holistic, multi-scale planning
Strategic & regional planning	Master plans
Execution plans & site supervision	
Nature-based solutions	Climate adaptation
Biophilic urban design	
Habitat-based planting design	
Native & endemic plant systems	
Stream & wetland restoration	
Statutory planning documents (Hebrew, English)	
Municipal & multidisciplinary coordination	

TOOLS

QGIS · spatial analysis & custom tools	AutoCAD
Rhino	Adobe Creative Suite

AWARDS

Copenhagen	Danish Governmental Award for Academic Excellence
Technion	Yechiel and Yosef Segal Award for Excellent BLA Thesis (1st place)

LANGUAGES

Hebrew	Native
English	Fluent, full professional
Danish	Basic, currently learning
